## **Swedish Onrox to manufacture BlueTex, Personal Mobile Gateway for WSI**

**Onrox has made an agreement with Swedish Wireless System Integration to manufacture the BlueTex Personal Mobile Gateway at Onrox's plant in Sweden, Malmö. The deliveries has started and ramp-up of production is ongoing. Onrox will manufacture the product box-built, i.e. ready for distribution to system integrators / end-users.**

The BlueTex is designed using the latest integrated wireless technologies, combining powerful short range Bluetooth and Mobitex, a narrowband data-only network that it is based on an open international standard. The BlueTex works as a gateway transforming signals between Bluetooth and Mobitex. The user connects through the device using a hand-held computer (PDA) and special designed software.

"Onrox provides the professional manufacturing services necessary when entering the market with an advanced product like the BlueTex personal mobile gateway. We chose Onrox because we need a reliable, competent partner who understands the importance of service and time to market," says Mr Jan-Åke Lindqvist, CEO of WSI.

"Launching a new product is a challenge. We are therefore very happy that WSI has placed its trust in Onrox and has chosen us as their manufacturing partner. This new deal makes an excellent fit with Onrox strategy and is therefore a most welcome addition to our client list," says Mr Stefan Borgström CEO of Onrox.
